

Kostiantyn Agapov | Software Engineer

konstagapov123@gmail.com | findkostas.com | [github/konstagap](https://github.com/konstagap) | in/kostiantyn-agapov

Systems-oriented Software Engineer specializing in the design and optimization of enterprise ecosystems. Proven expertise in developing customer-facing React applications and high-performance Spring Boot microservices. Adept at balancing frontend excellence with proactive observability, while leveraging AI-assisted development workflows to accelerate delivery and enhance code quality.

Backend | Spring Boot (MVC & Reactive), Java 21, Kotlin, Node, REST, GraphQL

Frontend | React, TypeScript, Redux, Next.js, Tailwind CSS, Formik, Styled Components

Testing | Gatling (Performance), Spring Boot Test, Playwright, Jest, React Testing Library (RTL)

Tools & Ops | Splunk (Observability), AI Productivity Tools, Git, Docker, Linux, Jenkins

PROFESSIONAL EXPERIENCE

Intuit | Software Engineer 2 | Nov 2023 – Present (Full-time)

- **High-Scale Microservices:** Developed and maintained high-traffic Spring Boot microservices powering TurboTax, leveraging Java 21 and Kotlin Coroutines within both Servlet and Reactive (WebFlux) environments to ensure resilient, non-blocking performance.
- **Core Logic & Algorithms:** Engineered a high-performance algorithm to calculate tax return completion status, enabling real-time progress tracking and data-driven insights for millions of users.
- **Feature Engineering:** Delivered mission-critical API endpoints supporting the "Calculation on Completion" feature, directly impacting the accuracy and speed of tax filing experience.
- **Performance Engineering:** Authored and executed complex **Gatling** load-testing scripts to simulate peak-season traffic, identifying bottlenecks and ensuring system stability under load.
- **Observability & Reliability:** Established comprehensive Splunk observability dashboards and proactive alerting systems, significantly reducing Mean Time to Detection by identifying anomalies before customer impact.
- **UI Delivery:** Developed customer-facing components for TurboTax Online, creating intuitive screens to guide users through unreviewed or incomplete tax topics in federal and final review.

Intuit | Software Engineer 2 | Oct 2022 – Nov 2023 (Contractor)

- **Architectural Migration:** Led the migration of a large-scale codebase to a modern technology stack, ensuring seamless integration through cross-functional collaboration and robust version control.
- **Component Architecture:** Developed reusable, type-safe React components in TypeScript and managed complex application states to improve UI consistency and developer velocity.
- **Quality Engineering:** Implemented comprehensive testing strategies, including automated unit, integration, and end-to-end (E2E) tests to prevent regressions in a high-stakes environment.
- **Platform Versatility:** Conducted manual and automated testing across Web, Android, and iOS platforms to ensure high-quality delivery across the ecosystem.
- **Documentation:** Authored and maintained technical documentation to streamline developer onboarding and enhance project scalability.

LexisNexis Risk Solutions | Software Engineer 3 | May 2021 – Oct 2022

- **Fullstack Development:** Built robust Node.js applications using Express, MySQL, and Sequelize, securing routes with Passport.js and JWT.
- **Data Visualization:** Engineered complex data tools, including interactive charts and maps, optimized for performance by reducing unnecessary re-renders.
- **Security & Identity:** Implemented digital credentialing using Microsoft Verifiable Credentials and custom authentication libraries.
- **Performance Optimization:** Refactored legacy code and utilized worker threads for heavy backend calculations to improve system efficiency and response times.

CSI WORKS | Front-end Web Developer | Sept 2019 – May 2021

- **UI/UX Implementation:** Translated complex wireframes into functional, cross-platform code using Styled Components and React.
- **Form Management:** Developed complex controlled forms with Formik, featuring rigorous input validation and sophisticated error handling.
- **State & Routing:** Managed application flow using React Router with protected/nested routing and optimized performance via component memoization.

EDUCATION

Kyiv University of Tourism, Economics and Law | Bachelor's Degree (2011)
